1. INTRODUCTION

Advanced Drug Sciences (ADS) is an international, peer-reviewed scholarly journal dedicated to advancing fundamental and translational research in drug discovery, pharmaceutical sciences, and therapeutic innovation. The journal aims to publish high-quality scientific contributions that demonstrate methodological rigor, analytical depth, and clear relevance to contemporary challenges in drug sciences.

ADS adheres to internationally recognized standards in scholarly publishing and follows best practices established by organizations such as the Committee on Publication Ethics and the International Committee of Medical Journal Editors. All submitted manuscripts must comply with these ethical and scientific standards.

Authors are required to carefully follow the present guidelines to ensure consistency, transparency, and efficiency throughout the peer review and publication process. Manuscripts that do not conform to these requirements may be returned prior to peer review.

2. AIMS AND SCOPE

Advanced Drug Sciences publishes high-quality, peer-reviewed research and authoritative reviews spanning the full continuum of drug discovery, development, and clinical application. The journal emphasizes mechanistic understanding, technological innovation, and translational impact across pharmaceutical and biomedical sciences.

ADS particularly aims to integrate advances from molecular design to real-world therapeutic outcomes, supporting a multidisciplinary and systems-level approach to drug science.

3. JOURNAL SECTIONS

Drug Discovery and Design

- Medicinal chemistry, structure–activity relationships, and molecular optimization
- Computational approaches, including molecular docking, in silico modeling, cheminformatics, and AI-driven drug discovery
- Synthetic and natural product-based lead identification

Drug Delivery and Pharmaceutical Sciences

- Advanced formulation and delivery systems, including nanocarriers and targeted delivery
- Biopharmaceutics, stability, and predictive analytical characterization
- Mechanistic and model-based formulation development

Pharmacology and Safety Sciences

- Molecular and systems pharmacology, receptor and signaling mechanisms
- Pharmacodynamics and translational pharmacology
- Preclinical and experimental toxicology

Translational and Clinical Sciences

Clinical and Translational Pharmacy

- Clinical trials, pharmacotherapy optimization, and precision medicine
- Real-world evidence and patient-centered outcomes

Regulatory Science and Drug Safety

- Pharmacovigilance, regulatory evaluation, and lifecycle management
- Risk–benefit assessment and post-marketing surveillance

Health Systems, Policy, and Outcomes Research

- Pharmacoeconomics, access to medicines, and healthcare decision-making

- Pharmacoepidemiology, rational drug use, and adherence
- Public health interventions related to medicine use

Frontier and Interdisciplinary Areas

- Pharmacognosy and bioactive natural products, including sustainable and ethnopharmacological approaches
- Biopharmaceuticals, vaccines, gene and cell therapies, and biomaterials
- Integration of pharmaceutical sciences with data science, artificial intelligence, systems biology, and biomedical engineering

4. ARTICLE TYPES

Research Article

Research Articles present original, hypothesis-driven studies with comprehensive experimental or computational data.

Requirements:

- Structured abstract (Background, Objective, Methods, Results, and Conclusion) (up to 250 words)
- Full methodological description enabling reproducibility
- Robust statistical and analytical validation
- Typically 4000–5000 words (excluding references)
- Figures/illustrations and tables (maximum 8)

Review Article

Review Articles provide a comprehensive and critical synthesis of existing literature.

Requirements:

- Non-structured abstract (up to 250 words)
- Clearly defined scope and objectives
- Critical analysis rather than descriptive summary
- Identification of research gaps and future directions
- Typically 6000–8000 words, but not more than 10000 words (excluding references)
- Figures/illustrations and tables (maximum 10)

Systematic Review / Meta-Analysis

These must follow standardized reporting frameworks such as PRISMA.

Requirements:

PUBLISHED BY  Universitas Muhammadiyah Surakarta Universitas Muhammadiyah Surakarta Jl. Ahmad Yani, Pabelan, Kartasura, Sukoharjo, 57169 Central Java, Indonesia	JOURNAL INFORMATION Advanced Drug Sciences (ADS) ISSN: XXXX-XXXX (In progress) Frequency: Quarterly Model: Continuous publication About the Journal	MANAGED BY Faculty of Pharmacy Universitas Muhammadiyah Surakarta
© 2026 Universitas Muhammadiyah Surakarta . All rights reserved.		

- Structured abstract (Background, Objective, Methods, Results, and Conclusion (up to 250 words))
- Clearly defined research question
- Systematic search strategy
- Inclusion and exclusion criteria
- Risk-of-bias assessment
- Quantitative synthesis (meta-analysis) where applicable
- Typically, 5000–8000 words (excluding references)
- Figures/illustrations and tables (maximum 10)

Short Communication

Short Communications report novel and significant findings that require rapid dissemination.

Requirements:

- Structured abstract (Background, Objective, Methods, Results, and Conclusion) (up to 200 words)
- Concise format (2000–3000 words) (excluding references)
- Figures/illustrations and tables (maximum 4)
- Focus on key findings without extensive discussion

Method Article

Advanced Drug Sciences welcomes methodological manuscripts that introduce innovative experimental, analytical, or computational approaches relevant to pharmaceutical and biomedical research. Method articles should present reproducible techniques that significantly advance experimental capability or improve existing methodologies. For a methods article, there are no specific limits on words, figures/illustrations, or tables.

Scope of Methodological Contributions

Suitable submissions may include:

- Novel analytical or experimental techniques in drug discovery and development
- Improved pharmaceutical formulation or drug delivery methodologies
- Advanced analytical methods for pharmacokinetic or pharmacodynamic studies
- Computational or modeling approaches applicable to drug sciences
- Innovative bioassays, screening platforms, or experimental workflows

Methods that provide substantial improvements in accuracy, sensitivity, reproducibility, efficiency, or scalability are particularly encouraged.

Requirements for Method Manuscripts

PUBLISHED BY  Universitas Muhammadiyah Surakarta Jl. Ahmad Yani, Pabelan, Kartasura, Sukoharjo, 57169 Central Java, Indonesia	JOURNAL INFORMATION Advanced Drug Sciences (ADS) ISSN: XXXX-XXXX (In progress) Frequency: Quarterly Model: Continuous publication About the Journal	MANAGED BY Faculty of Pharmacy Universitas Muhammadiyah Surakarta
---	---	--

© 2026 Universitas Muhammadiyah Surakarta . All rights reserved.

Methodological novelty or advancement

The manuscript must describe either:

- A new method, or
- A significant improvement of an established method.

Incremental procedural modifications without demonstrable advantages are generally not considered suitable.

Reproducible protocol description

Authors must provide sufficient methodological detail to enable independent replication of the procedure. Submissions should include:

- Comprehensive descriptions of materials, reagents, and equipment
- Experimental parameters and instrumentation settings
- Data acquisition and analysis procedures
- Step-by-step methodological workflow

Method validation

The performance of the proposed method must be validated through appropriate experimental or computational evaluation. Validation may include:

- Comparative benchmarking against existing techniques
- Statistical analysis of accuracy, precision, or sensitivity
- Reproducibility assessments across independent experiments

Demonstration of practical utility

The manuscript should clearly demonstrate how the proposed method addresses a significant experimental or analytical challenge within drug sciences. Authors should discuss the potential applications, advantages, and limitations of the method.

Structured presentation

Methodological manuscripts should generally include the following sections:

- Abstract
- Introduction
- Principle of the Method
- Materials and Equipment
- Experimental Procedure
- Data Analysis
- Validation and Performance Evaluation

- Applications and Limitations
- Conclusions

Detailed descriptions of critical steps and troubleshooting guidance are strongly encouraged.

Data availability and reproducibility

Authors should ensure that all data, protocols, software scripts, and analytical workflows necessary to reproduce the method are accessible to readers.

Editorial Evaluation

Method manuscripts submitted to ADS are assessed based on:

- Scientific rigor and methodological soundness
- Reproducibility and transparency of experimental procedures
- Demonstrated improvement over existing techniques
- Relevance and utility to the broader drug sciences community

Submissions that primarily report biological findings without introducing methodological innovation should be submitted as original research articles rather than method papers.

Perspective

Perspective Articles provide forward-looking scholarly analyses that highlight emerging scientific directions, conceptual advances, or technological innovations in drug sciences. These articles are intended to stimulate scientific discussion, propose new research frameworks, and critically evaluate emerging opportunities or challenges in pharmaceutical and biomedical research.

Unlike conventional review articles, Perspectives focus on interpretation, synthesis, and conceptual advancement rather than exhaustive literature coverage. Authors are expected to integrate recent scientific developments with expert insight to identify key research gaps and propose future research trajectories.

Perspective articles should maintain a balanced and evidence-based argument, supported by relevant literature and clearly articulated reasoning. Authors should avoid speculative claims that are not supported by scientific evidence. Authors are encouraged to include conceptual diagrams or graphical frameworks that illustrate proposed models or emerging research directions.

Requirements:

- Non-structured abstract (up to 200 words)
- Concise format (3000–4000 words) (excluding references)
- Figures/illustrations and tables (maximum 6)

Opinion / Viewpoint

Opinion or Viewpoint Articles provide concise scholarly commentary on contemporary scientific, technological, regulatory, or policy developments relevant to pharmaceutical research and drug development. These contributions present informed interpretations or critical reflections on current developments that may influence the future trajectory of drug sciences.

Opinion articles are typically shorter and more focused than Perspectives and emphasize timely commentary or scholarly interpretation rather than extensive conceptual analysis. Authors should maintain a professional and evidence-based tone. While opinion pieces may present personal scholarly viewpoints, arguments should be supported by credible evidence and relevant literature.

Requirements:

- Structured abstract (Background, Objective, Methods, Results, and Conclusion) (200 words)
- Concise format (1500–2500 words) (excluding references)
- Limited figures/illustrations and tables (maximum 3)

Letter to the Editor

Letters to the Editor provide a formal mechanism for scholarly discussion and post-publication evaluation of research published in *Advanced Drug Sciences*. These contributions allow readers to comment on recently published articles, highlight methodological considerations, discuss alternative interpretations of findings, or raise scientific questions relevant to the published work.

Letters are intended to facilitate constructive scientific dialogue and should maintain a professional and evidence-based tone. Personal criticism or unsupported claims are not appropriate for this article type.

Letters must clearly reference the ADS article being discussed and should focus on specific scientific issues, including methodological concerns, data interpretation, statistical analysis, or broader implications of the published findings.

Whenever appropriate, authors of the original article may be invited by the editorial office to provide a formal reply, which may be published alongside the Letter.

Letters that introduce substantial new experimental data or extensive original analyses should instead be submitted as Research Articles or Short Communications.

Letters are assessed primarily by the editorial office and may undergo external peer review if the scientific issues raised require expert evaluation. The editorial team may also invite a response from the authors of the original article.

Requirements:

- Maximum 700 words
- No abstract
- Limited references (≤ 5)
- Must relate to recently published articles
- Maximum one visual item (Figure/Illustration/Table) should only be included when essential to clarify a scientific argument or illustrate methodological concerns.

Correspondence

Correspondence articles provide concise scholarly discussions addressing specific scientific questions, clarifications, or brief observations relevant to drug sciences. Unlike Letters to the Editor, Correspondence submissions are not necessarily linked to a specific article previously published in ADS.

These contributions are intended to highlight focused scientific issues, methodological considerations, emerging research questions, or brief analytical insights that contribute to scholarly dialogue within the field.

Correspondence articles should be concise and analytical, emphasizing clarity and relevance to ongoing scientific discussions.

Submissions presenting extensive datasets or experimental results should instead be submitted as Research Articles or Short Communications.

The editorial office may determine whether external peer review is required depending on the scientific complexity of the topic.

Requirements:

- Maximum 1200 words (including references)
- No abstract
- Limited references (≤ 12)
- Limited figures/illustrations and tables (maximum 2)
- Figures may include conceptual illustrations, analytical diagrams, or concise visual summaries that support the scholarly argument.

Editorial

Editorial articles are written by members of the editorial board or invited experts and provide commentary on important scientific developments, emerging research priorities, or issues related to scholarly publishing in drug sciences.

Editorials may also introduce special issues, thematic collections, or strategic initiatives of the journal.

Requirements:

- Maximum 1000 words (including references)
 - No abstract
 - Limited references (≤ 8)
 - Limited figures/illustrations/tables (maximum 1)
 - Figures may include conceptual illustrations, analytical diagrams, or concise visual summaries that support the scholarly argument.

Special Issues

ADS publishes thematic collections and conference-based issues managed by guest editors. All submissions undergo standard peer review and must meet the same scientific and ethical standards as regular submissions.

ADS News (Non-indexed; Non-peer-reviewed)

ADS News is an editorial section dedicated to communicating developments shaping the global academic and scientific ecosystem. It publishes accessible yet intellectually rigorous content covering research, policy, academic careers, and postgraduate education.

5. BEFORE YOU BEGIN

Authors are required to carefully review the following policies and requirements prior to submission. Compliance with these standards is essential to ensure ethical integrity, transparency, and consistency with international publishing practices.

Failure to adhere to these requirements may result in administrative rejection prior to peer review.

Ethical Standards and Research Integrity

All submissions to Advanced Drug Sciences (ADS) must comply with internationally recognized standards of research integrity and publication ethics, including those outlined by the [Committee on Publication Ethics \(COPE\)](#).

Authors are required to ensure that:

- The work is original and has not been fabricated, falsified, or manipulated
- All data are presented accurately and transparently
- Proper acknowledgment is given to prior work through appropriate citation
- The manuscript does not contain plagiarized or substantially overlapping content

The journal employs similarity detection systems to evaluate originality. Manuscripts exhibiting significant overlap, redundant publication, or unethical practices will be rejected without peer review.

Confirmed cases of misconduct may result in:

- Rejection or retraction of the manuscript
- Notification to the authors' affiliated institutions
- Restrictions on future submissions

Studies Involving Human Participants

Research involving human participants must be conducted in accordance with recognized ethical standards, including the [Declaration of Helsinki](#).

Authors must provide a clear statement in the manuscript confirming that:

- Ethical approval was obtained from a recognized institutional review board or ethics committee
- The approval reference number and date are specified
- The study complies with applicable national and institutional regulations

Additionally, authors must confirm that:

- Informed consent was obtained from all participants prior to inclusion in the study
- Participants' privacy and confidentiality have been strictly protected

Manuscripts lacking appropriate ethical approval or consent documentation will not be considered for publication.

Studies Involving Animals

All research involving animals must adhere to established ethical guidelines and regulatory standards governing animal experimentation.

Authors must explicitly state that:

- The study was approved by an appropriate institutional or national ethics committee
- The research complies with relevant animal welfare regulations
- All efforts were made to minimize suffering and reduce the number of animals used

Authors are expected to follow recognized reporting standards such as [ARRIVE guidelines](#) where applicable.

Failure to demonstrate ethical compliance will result in rejection of the manuscript.

Informed Consent and Patient Data

For studies involving human participants, patients, or identifiable personal data:

- Written informed consent must be obtained prior to participation
- Consent must cover publication of clinical details, images, or personal data where applicable
- Identifiable information must be removed unless explicit permission has been granted

Authors must retain all consent documentation and provide it upon request by the editorial office.

The inclusion of identifiable patient information without appropriate consent constitutes a violation of ethical standards and will result in immediate rejection.

Declaration of Competing Interests

All authors must disclose any financial, professional, or personal relationships that could influence or bias the work.

Authors are required to:

- Declare all relevant competing interests at the time of submission
- Include a dedicated “Conflict of Interest” statement within the manuscript

Examples of competing interests include, but are not limited to:

- Employment or consultancy
- Research funding or grants
- Stock ownership or intellectual property interests
- Honoraria or paid expert testimony

If no competing interests exist, authors must state:

“The authors declare no competing interests.”

Failure to disclose relevant conflicts may result in rejection, correction, or retraction.

Use of Artificial Intelligence in Scientific Writing

The use of generative artificial intelligence (AI) and AI-assisted technologies in manuscript preparation is subject to strict limitations.

Authors may use such tools only for:

- Improving language clarity
 - Enhancing readability

Authors must not use AI tools for:

- Generating scientific content, interpretation, or conclusions
- Data analysis or result generation
- Authorship attribution

If AI tools are used, authors must include a disclosure statement in the manuscript specifying:

- The name of the tool
- The purpose of its use

AI tools cannot be listed as authors under any circumstances.

Authors retain full responsibility for the accuracy, integrity, and originality of the manuscript.

Submission Declaration and Originality

Submission of a manuscript to ADS constitutes confirmation that:

- The work has not been previously published in any form, except as a preprint, thesis, or abstract
- The manuscript is not under consideration by another journal
- All authors have approved the submission
- The work complies with institutional and regulatory requirements

The journal reserves the right to verify originality using similarity-checking tools.

Duplicate submission or concurrent submission to multiple journals is strictly prohibited and will result in immediate rejection.

Preprint Policy

ADS permits submission of manuscripts that have been previously posted on recognized preprint servers.

Authors must:

- Disclose the existence of a preprint at the time of submission
- Provide the DOI or link to the preprint version

Preprints are not considered prior publication.

However, authors must ensure that:

- The submitted manuscript reflects the version intended for peer review
- The preprint is not updated to include peer-reviewed content prior to formal publication

Inclusive Language and Scientific Neutrality

Authors must ensure that manuscripts are written using inclusive, respectful, and unbiased language.

Manuscripts should:

- Avoid discriminatory or stereotypical expressions
- Use terminology that is scientifically accurate and culturally appropriate
- Refrain from unnecessary reference to personal attributes such as gender, ethnicity, or age unless scientifically relevant

The use of biased or inappropriate language may result in revision requests prior to peer review.

Sex- and Gender-Based Reporting

For research involving humans, animals, or biological systems, authors must:

- Clearly define and distinguish between sex and gender where applicable
- Describe how sex and/or gender variables were considered in study design and analysis
- Report findings disaggregated by sex or gender where relevant

If such analysis is not conducted, authors must provide a justification and discuss this as a limitation.

Accurate reporting of sex and gender enhances the reproducibility and applicability of research findings.

Changes to Authorship

Authorship must be determined prior to initial submission and must accurately reflect the contributions of all individuals involved in the work.

Authors are required to:

- Provide the complete and final list of authors at the time of submission
- Ensure that all listed authors meet the authorship criteria defined by the International Committee of Medical Journal Editors
- Confirm that all authors have reviewed and approved the submitted version of the manuscript
- Any request to modify the authorship (including addition, removal, or rearrangement of author names) must be submitted before the manuscript is formally accepted.

Such requests must include:

- A clear and detailed justification for the proposed change
- Written confirmation (email or formal letter) from all listed authors, including any author being added or removed, indicating agreement with the change

Post-acceptance changes to authorship are not permitted under any circumstances.

Requests submitted after acceptance will not be considered, except in cases of demonstrable editorial or administrative error.

Copyright, Licensing, and Permissions

PUBLISHED BY  Universitas Muhammadiyah Surakarta Jl. Ahmad Yani, Pabelan, Kartasura, Sukoharjo, 57169 Central Java, Indonesia	JOURNAL INFORMATION Advanced Drug Sciences (ADS) ISSN: XXXX-XXXX (In progress) Frequency: Quarterly Model: Continuous publication About the Journal	MANAGED BY Faculty of Pharmacy Universitas Muhammadiyah Surakarta
© 2026 Universitas Muhammadiyah Surakarta . All rights reserved.		

Advanced Drug Sciences (ADS) is an open access journal. Authors retain copyright of their published work.

Upon acceptance of a manuscript:

- Authors will be required to agree to the journal's licensing terms
- Articles will be published under an open access license that permits distribution and reuse in accordance with the selected license conditions

Use of Third-Party Material

If the manuscript includes any material that is not original to the authors (including but not limited to figures, tables, images, graphical elements, or substantial text excerpts), authors must:

- Obtain written permission from the original copyright holder prior to submission
- Ensure that the permission covers reuse in an open access publication
- Provide appropriate attribution within the manuscript

Authors must upload all permission documents during submission or upon request by the editorial office.

Failure to provide valid permissions may result in:

- Delay in publication
- Removal of the material
- Rejection of the manuscript, where necessary

Funding Disclosure

Authors must disclose all sources of financial support related to the research described in the manuscript.

The funding statement must:

- Be included in a dedicated section of the manuscript
- Clearly identify all funding organizations using their official names
- Include grant numbers where applicable
- Specify the role of the funding body in study design, data collection, analysis, and publication decisions

Where no external funding was received, authors must include the statement:

“This research received no external funding.”

Incomplete or misleading funding disclosures may result in rejection or post-publication correction.

Responsibility and Accountability

Authors bear full responsibility for the content of their submitted and published work.

By submitting a manuscript, authors confirm that:

- All data presented are accurate and have not been manipulated in a misleading manner
- The study has been conducted in accordance with accepted scientific and ethical standards

- All authors take public responsibility for the integrity of the work

The journal, publisher, and editorial team do not assume responsibility for:

- The application of methods or findings described in the publication
- Any consequences arising from the use of published information

Authors are encouraged to ensure independent validation of findings where appropriate.

Compliance and Enforcement

Compliance with the journal's policies is mandatory.

The editorial office reserves the right to:

- Reject manuscripts that do not meet ethical, scientific, or formatting requirements
- Request additional documentation or clarification at any stage of the review process
- Withdraw acceptance if serious issues are identified prior to publication
- Issue corrections, retractions, or expressions of concern in accordance with COPE guidelines

Authors are expected to cooperate fully with all editorial and ethical inquiries.

Author Rights

Authors publishing in Advanced Drug Sciences (ADS) retain copyright of their work, subject to the terms of the journal's open access licensing policy.

Upon acceptance and publication, authors are granted the following rights:

- The right to share, distribute, and communicate their published article in accordance with the applicable open access license
- The right to deposit the published version or accepted manuscript in institutional or subject repositories
- The right to reuse figures, tables, and content from their article in future scholarly works, provided appropriate citation is given

Authors are responsible for ensuring that:

- Any third-party material included in the manuscript has been properly licensed or permitted for reuse
- Proper attribution is provided for all reused content

The specific terms of reuse and distribution are governed by the selected open access license under which the article is published.

Disclaimer

The content published in Advanced Drug Sciences (ADS) is intended solely for academic and research purposes.

Practitioners, researchers, and other users are advised to exercise their own professional judgment and expertise when interpreting and applying the information, methods, compounds, or experimental findings described in published articles.

Due to the evolving nature of scientific knowledge, particularly in biomedical and pharmaceutical sciences, independent verification of experimental procedures, clinical practices, and drug-related information, including dosages and safety considerations, is strongly recommended.

To the fullest extent permitted by applicable law, the publisher, editors, and affiliated institutions disclaim any liability for:

- Any direct or indirect loss, damage, or injury to persons or property arising from the use or application of information contained in the journal
- Any errors, omissions, or inaccuracies in published content
- Any consequences resulting from reliance on the methods, products, instructions, or ideas described in the publication

Responsibility for the content of each article rests solely with the authors.

6. SUBMISSION PROCESS

All manuscripts must be submitted electronically through the journal's online submission system (OJS). Submissions via email or other methods will not be considered.

Authors are required to ensure that all submission components are complete and correctly formatted prior to submission. Incomplete submissions may be returned without review.

Submission Requirements

At the time of submission, authors must upload the following files:

Main Manuscript File (Blinded)

- Must not contain any author-identifying information
- Includes:
 - Title
 - Abstract
 - Keywords
 - Main text (as per the structure of article type)
 - References

Title Page (Separate File)

Must include:

- Full article title
- Author names and affiliations
- Corresponding author details (email and address)
- ORCID IDs (mandatory for corresponding authors; recommended for all co-authors)

- Funding statement
- Conflict of interest declaration
- Author Contributions (in accordance with the [CRediT \(Contributor Roles Taxonomy\) guidelines](#))

Figures

- Submitted as separate high-resolution files (for online upload)
- Embedded within the manuscript as well

Supplementary Materials (if applicable)

- Raw data must be deposited in a recognized public data repository (e.g., [Zenodo](#), [Figshare](#), or an appropriate domain-specific repository). Authors are required to provide a persistent link (DOI or stable URL) to the deposited dataset at the time of submission. The data must be sufficiently detailed to enable independent verification and reproducibility of the reported results.
- Extended methods
- Additional tables/figures

Cover Letter

- Mandatory for all submissions

Common Submission Errors:

- Author names/laboratory name/university name included in blinded manuscript
- Missing ORCID ID for corresponding author
- Incomplete cover letter
- Mismatch between files

Submission Declaration

During submission, authors must confirm that:

- The manuscript complies with all journal policies
- Ethical requirements have been fulfilled

- All authors have approved the submission

False declarations may result in rejection or withdrawal of the manuscript.

7. PEER REVIEW PROCESS

ADS operates a double-blind peer review system.

- Authors and reviewers remain anonymous
- Each manuscript is evaluated by at least two independent reviewers
- Editorial decisions are based on scientific merit, originality, and relevance
- The editorial office reserves the right to:
- Reject manuscripts at the initial screening stage
- Request revisions prior to peer review
- Seek additional expert opinions where necessary

Further details are available on the [Peer Review Process page](#).

8. MANUSCRIPT PREPARATION

General Formatting

- Use the official ADS template
- Font: Times New Roman, 11 pt
- Line spacing: 1.15
- Continuous line numbering recommended
- Page numbers must be included

Important:

Download the official template here: [ADS Manuscript Template](#)

Language

- Manuscripts must be written in clear, grammatically correct English
- Authors may use either American or British English; however, consistency must be maintained throughout the manuscript.

Authors are responsible for language accuracy. Manuscripts with poor language quality may be returned prior to review.

Units and Nomenclature

- Use SI units throughout
- Chemical nomenclature must follow [IUPAC standards](#)
- [Gene and protein names](#) must follow accepted conventions

9. REFERENCES

Citation Style

Vancouver Referencing Style (Non-superscripted Number Format)

Advanced Drug Sciences adopts the Vancouver (numbered) referencing system using **non-superscripted citation numbers in square brackets**. This format must be applied consistently throughout the manuscript.

In-text citation

- References must be cited in consecutive numerical order according to their first appearance in the text.
- Citations must appear in square brackets (not superscript), for example: [1], [2], [3–5].
- Multiple citations should be separated by commas, and ranges indicated using an en dash.
- Each reference number should be assigned once and reused consistently throughout the manuscript.

When referring to authors within the narrative text:

- Single author: Author A [1]
- Two authors: Author A and Author B [2]
- More than two authors: Author A *et al.* [3]

Reference list

- The reference list must be arranged in the same numerical order as citations appear in the text.
- Ensure accuracy and completeness of all bibliographic information.
- List up to six authors; if more than six, include the first six followed by *et al.*
- Journal titles must be abbreviated in accordance with the conventions of the U.S. National Library of Medicine (NLM), as recommended by the International Committee of Medical Journal Editors (ICMJE). Authors should use the official journal title abbreviations listed in the NLM Catalog (as used in MEDLINE/PubMed). These abbreviations follow the ISO 4 standard for serial title abbreviations. If a journal is not indexed in MEDLINE, authors should verify or construct the abbreviation using ISO 4 conventions, with reference to authoritative sources such as the ISSN Portal or the CAS Source Index (CASSI). Consistency with NLM abbreviations is required throughout the reference list.
- Follow the exact order: Author(s). Title. Source. Year; Volume(Issue):Pages, and DOI (where available).

Reference management tools

The journal uses an **EndNote-based workflow** for reference standardization. Authors may use any reference management software; however, all submitted manuscripts must strictly conform to the journal's prescribed

reference style. Submissions containing incorrectly formatted references may be returned to authors for revision prior to peer review.

Official and compatible Vancouver style files are available from the following sources:

- **EndNote** (Vancouver Style):
https://endnote.com/style_download/vancouver/
- **Zotero** (Vancouver Style):
<https://www.zotero.org/styles/vancouver>
- **Mendeley** **CSL** **Repository** (Vancouver Style):
<https://cs1.mendeley.com/styles/229690531/vancouver>

Authors must verify that the selected output style generates **non-superscripted numbered citations in square brackets** and fully complies with ADS formatting requirements prior to submission.

Reference Formatting Examples

Examples

The following examples illustrate the Vancouver (numbered, non-superscripted) referencing style as generated by standard EndNote output and aligned with NLM/ICMJE recommendations.

10. FIGURES AND TABLES

Figures

Figure Requirements

- Formats: TIFF, JPEG, PNG
- Minimum resolution: 300 dpi
- Clear labeling and legible text
- Consistent font style and size
- Submit as separate files
- Number consecutively in the same order they appeared in the manuscript

Figures and tables must represent original data. The use of AI tools to generate or modify visual materials is not permitted. Please refer to the [AI Use Policy](#) for details.

Figure Caption and Legends

- Must be concise and descriptive
- Label as Fig. figure number. (For example, Fig. 1., Fig. 2., Fig. 3.,)
- Place each figure caption below its corresponding figure (e.g., image, illustration, or graph).
- Should allow independent interpretation
- Define symbols, abbreviations, and conditions

Tables

Must be editable (not images)

- Numbered consecutively
- Label as Table Number. (For example, Table 1., Table 2., Table 3.,)
- Place each table caption above its corresponding table. Tables should be self-explanatory and clearly labeled.
- Provide footnotes where necessary

11. GRAPHICAL ABSTRACT

A graphical abstract is highly recommended for Research Articles and all types of Reviews.

Requirements:

- A single, high-quality image summarizing the main findings
- Minimum resolution: 300 dpi
- Recommended size: approximately 1200 × 600 pixels
- Minimal text; focus on visual clarity

The graphical abstract should enhance understanding and not duplicate figures in the manuscript.

12. Cover Letter

A cover letter is required for all submissions and must be submitted as a separate document.

The cover letter must include:

- Full title of the manuscript
- Brief description of the study and its significance
- Statement of novelty and contribution to the field
- Confirmation that the manuscript is original and not under consideration elsewhere
- Disclosure of any conflicts of interest
- Optional: suggestion of potential reviewers (with justification)

Example structure:

Dear Editor,

We are pleased to submit our manuscript entitled “[*Title*]” for consideration in Advanced Drug Sciences.

This study investigates... [brief summary]. The findings provide... [novel contribution].

We confirm that this work is original and not under consideration elsewhere. All authors have approved the manuscript.

We declare [conflict/no conflict].

Thank you for your consideration.

Sincerely,
[Corresponding Author Name]

13. DATA AVAILABILITY

Authors must include a Data Availability Statement describing:

- Where data supporting the findings can be accessed
- Repository name and DOI (if applicable)

If data cannot be shared, authors must provide a justified explanation.

14. SUBMISSION CHECKLIST

Authors must ensure the following prior to submission:

- Manuscript prepared using ADS template ✓
- Blinded manuscript file ✓
- Title page provided ✓
- Figures meet resolution requirements ✓
- References formatted correctly ✓
- Ethical statements included ✓
- Conflict of interest disclosed ✓
- Cover letter submitted ✓

Failure to comply may result in administrative return.

15. ARTICLE PROCESSING CHARGES (APC) AND WAIVER POLICY

Advanced Drug Sciences implements a transparent and equitable Article Processing Charge (APC) model to support editorial management, rigorous peer review, professional production, online dissemination, and long-term digital preservation. The journal is committed to ensuring that financial considerations do not influence editorial decisions at any stage of the peer review and publication process.

APC Structure by Publication Period

2026–2027 (Introductory Period)

- **Standard APC:** USD 950 per accepted article (or equivalent in local currency, where applicable)
- **Waiver Policy:** A full (100%) APC waiver will be granted for all accepted manuscripts during this period.
- **Author Obligation:** No payment is required for articles accepted within this timeframe.

From 2028 Onward

- **Standard APC:** USD 950 per accepted article
- APC waivers and discounts will be applied in accordance with the policy outlined below

Payment Terms and Conditions

- An official invoice with payment instructions will be issued upon acceptance of the manuscript. Payment must be completed prior to publication.
- All bank charges, intermediary fees, currency conversion costs, and applicable taxes are the responsibility of the author and are not included in the stated APC.
- The journal reserves the right to delay publication or suspend processing of accepted manuscripts in cases of non-payment.
- All payments are non-refundable, except in cases of administrative or billing errors attributable to the publisher.

Waiver Governance and Eligibility

Advanced Drug Sciences (ADS) is committed to equitable access to publication. APC waivers and discounts are provided in accordance with the following principles:

Editorial Independence

Waiver or discount decisions are independent of editorial and peer review processes.

Automatic Eligibility

Authors from countries classified by the World Bank as low-income are eligible for full APC waivers. Authors from lower-middle-income countries may be considered for partial or full discounts.

Case-by-Case Consideration

Authors not covered by automatic eligibility may request a waiver or discount based on demonstrated financial need. Requests are evaluated confidentially.

Timing and Process

Authors are not required to request a waiver prior to submission. Requests may be submitted upon or after acceptance by contacting the editorial office.

Funding Expectation

Authors with institutional, grant, or other research funding are expected to cover the APC where possible.

Non-Guarantee Clause

Waivers and discounts are granted at the journal's discretion and are not guaranteed.

Integrity Statement

The ability to pay APCs does not influence editorial decisions.

Misuse and Verification

The journal reserves the right to verify waiver requests and to decline requests in cases of insufficient justification or suspected misuse.

Ethical and Transparency Standards

This APC policy is implemented in accordance with internationally recognized standards for transparency and best practice in scholarly publishing, including guidance from the Committee on Publication Ethics (COPE).

PUBLISHED BY  Universitas Muhammadiyah Surakarta Jl. Ahmad Yani, Pabelan, Kartasura, Sukoharjo, 57169 Central Java, Indonesia	JOURNAL INFORMATION Advanced Drug Sciences (ADS) ISSN: XXXX-XXXX (In progress) Frequency: Quarterly Model: Continuous publication About the Journal	MANAGED BY Faculty of Pharmacy Universitas Muhammadiyah Surakarta

The journal periodically reviews its APC structure and waiver mechanisms to ensure fairness, inclusivity, and alignment with global publishing standards.

16. PUBLICATION ETHICS

Advanced Drug Sciences (ADS) is committed to maintaining the highest standards of integrity, transparency, and accountability in scholarly publishing. The journal follows internationally recognized guidelines, including those of the Committee on Publication Ethics (COPE).

Editorial Independence

Editorial decisions are based solely on scientific merit, originality, and relevance. Financial considerations do not influence editorial decisions at any stage.

Authorship

Authors must have made substantial contributions to the work and approve the final manuscript. All contributors who do not meet authorship criteria should be acknowledged appropriately.

Originality and Plagiarism

All submissions must be original and free from plagiarism. Duplicate submission and data fabrication are strictly prohibited.

Ethical Approval

Studies involving human or animal subjects must include appropriate ethical approval and informed consent.

Peer Review

ADS operates a double-blind peer review process to ensure fair and unbiased evaluation.

Misconduct

Allegations of misconduct will be handled in accordance with COPE guidelines and may result in rejection, correction, or retraction.

17. CONFLICT OF INTEREST POLICY

All participants in the publication process must disclose any relationships or interests that could influence their work.

Definition

A conflict of interest exists when professional judgment may be influenced by financial, personal, academic, or institutional relationships.

For Authors

Authors are required to disclose all potential conflicts of interest at the time of manuscript submission. A conflict of interest exists when professional judgment concerning the validity or interpretation of research may be influenced, or perceived to be influenced, by secondary interests, including financial, personal, academic, or institutional relationships.

Authors must disclose, where applicable:

- All sources of funding and financial support
- Employment, consultancies, honoraria, or paid expert testimony

- Stock ownership, equity interests, or patents (granted or pending)
- Institutional affiliations or collaborations that may be perceived as influencing the work
- Any other relationships or activities that could be viewed as a potential conflict

A **Conflict of Interest statement** must be included in the manuscript under a dedicated section.

If no conflicts of interest exist, authors must explicitly state:

“The authors declare no conflict of interest.”

All disclosures will be evaluated by the editorial office and, where appropriate, published alongside the article in the interest of transparency.

Failure to disclose relevant conflicts of interest may result in rejection of the manuscript, retraction of a published article, or other corrective actions in accordance with the journal’s ethical policies.

For Reviewers

Reviewers should decline assignments if a conflict exists, including recent collaboration or institutional affiliation.

For Editors

Editors must recuse themselves from handling manuscripts where a conflict of interest exists.

Transparency

Declared conflicts will be evaluated and disclosed where appropriate.

18. AI USE POLICY

Advanced Drug Sciences (ADS) permits the responsible use of artificial intelligence (AI)–assisted tools in scholarly publishing, provided that such use is transparent, limited in scope, and does not compromise the integrity, confidentiality, or originality of the work.

This policy should be read in conjunction with the [Publication Ethics](#) and [Conflict of Interest Policy](#).

General Principles

- AI tools must not replace human judgment, authorship, or editorial responsibility.
- All use of AI must be transparent and appropriately disclosed where required.
- Confidential or proprietary materials must not be uploaded to AI systems.
- All parties remain fully accountable for the accuracy, integrity, and confidentiality of the content.

For Authors

Authors may use AI-assisted tools for limited purposes, such as language editing, provided that such use is properly disclosed and critically verified.

- **Disclosure:** Authors must disclose the use of AI tools in a dedicated statement within the manuscript, including the name of the tool and its purpose.
- **Authorship:** AI tools must not be listed as authors or co-authors.
- **Responsibility:** Authors remain fully responsible for the accuracy, originality, and integrity of all content.

- **Permitted Use:** Language editing, grammar correction, readability improvement, and data analysis (where scientifically appropriate).
- **Prohibited Use:** AI tools must not be used to generate or alter scientific results, conclusions, or interpretations in a misleading manner, or to produce substantive scholarly content without critical human oversight.
- **AI-Generated Figures, Tables, and Artwork:**
 - The use of AI tools to generate or modify figures, tables, graphical abstracts, or any visual materials representing scientific data or results is not permitted.
 - Visual materials must be derived directly from original data and must accurately reflect the underlying methods and results.
 - AI-assisted fabrication, enhancement, or manipulation of images, figures, or datasets that alters interpretation is strictly prohibited.
 - Standard data visualization tools (e.g., statistical or graphing software) are permitted when based on authentic data.
- **Verification:** Authors must review and validate all AI-assisted outputs to ensure accuracy, completeness, and absence of bias.

Disclosure Examples

Authors should provide clear and specific disclosure statements. Examples include:

Language editing:

- “The authors used ChatGPT (OpenAI) to assist with grammar and language clarity. The authors reviewed and edited all outputs and take full responsibility for the content.”

General prompt-based assistance:

- “The authors used ChatGPT (OpenAI) for language refinement using general prompts related to clarity and readability. No scientific content or conclusions were generated by AI.”

If no AI tools were used, authors should state:

“No AI-assisted tools were used in the preparation of this manuscript.”

For Reviewers

- Reviewers must not upload manuscripts or any confidential materials into AI tools.
- AI tools must not be used to generate or assist peer review reports.
- All evaluations must be conducted independently and confidentially.

For Editors

- Editors must not upload submitted manuscripts, reviewer reports, or correspondence into AI systems.
- AI tools must not be used in editorial decision-making or manuscript evaluation.

- Editors are responsible for ensuring decisions are based solely on scholarly merit and ethical standards.

Editorial Clarification and Verification

Editors may request clarification regarding the use of AI tools where disclosure is unclear or where concerns arise about the integrity of the content. Such requests may include a general description of how AI tools were used. Authors are not required to disclose proprietary prompts, confidential data, or sensitive information.

Compliance and Enforcement

Failure to comply with this policy, including non-disclosure or misuse of AI tools, may be considered a breach of publication ethics and may result in rejection, correction, or retraction.

19. OPEN ACCESS POLICY

Advanced Drug Sciences (ADS) is a fully open access journal. All articles are made freely and permanently available online immediately upon publication, without subscription or access barriers.

This policy is consistent with the principles of the Budapest Open Access Initiative (BOAI), which advocates for the free availability of research literature on the public internet, permitting users to read, download, copy, distribute, print, search, or link to the full texts of articles without financial, legal, or technical barriers.

Access and Reuse

Users are permitted to:

- Read and download the full text of all articles
- Copy and redistribute the material in any medium or format
- Adapt, remix, transform, and build upon the material
- Use the content for any lawful purpose, including commercial use

All reuse must comply with the terms of the CC BY 4.0 license, including proper attribution to the original authors and source.

Author Rights

Authors retain copyright of their work and grant ADS the right to publish and disseminate the article as the original publisher. Authors may share and reuse their published work without restriction, provided that proper attribution is maintained.

Self-Archiving Policy

The journal supports open dissemination of research and allows authors to deposit and share their manuscript at any stage of the publication process.

- **Preprint:** Authors may share the submitted version prior to peer review.
- **Accepted Manuscript:** Authors may share the peer-reviewed and accepted version.
- **Version of Record:** Authors may share the final published version.

Deposited versions should include a proper citation and, where available, a link to the final published article in *Advanced Drug Sciences*.

This policy is compatible with international repository standards such as [SHERPA/RoMEO](#).

20. COPYRIGHT & LICENSING

All articles published in *Advanced Drug Sciences* (ADS) are open access and made freely available immediately upon publication.

Copyright

Authors retain full copyright of their work without restriction.

License

All articles are published under the **Creative Commons Attribution 4.0 International (CC BY 4.0)** license.

This license permits unrestricted use, distribution, adaptation, and reproduction in any medium, provided that appropriate credit is given to the original authors and the source.
